Title

Efficient Extraction of High-Resolution Static Images from Google Maps for Research, Documentation and Educational Applications

Abstract Upload

 [DownloadMapImage_Technical_White_Paper.pdf](#)

Abstract

High-resolution map imagery is widely used in research, technical documentation, education, and GIS-related projects. This work presents a practical workflow for extracting publication-ready static images from Google Maps while preserving image clarity and consistent visual quality. The proposed method enables users to capture customized map views with configurable zoom levels, image sizes, and locations, reducing the time required for manual screenshots. The workflow is suitable for preparing figures for academic publications, reports, presentations, and educational materials. The paper also discusses image quality optimization, usability considerations, and responsible use of publicly available map imagery. Experimental evaluation indicates that the proposed workflow significantly improves efficiency while producing

clear, high-resolution map illustrations suitable for documentation and non-commercial research purposes.
